

Bullet StickFit

Bullet is unique combining the StickFit system design and the high performance thread with the instant-bite tip allows one handed operation and drives more screws for each battery charge, saving time and effort.

The Bullet StickFit system is designed so that the screw head tightly fits into the bit without using magnets, so that there is no need to hold the screw in place and allowing one handed installation.

The pozisquare drive design of the bit and head give more efficiency to drilling, and along with the high performance thread design, gives speed and precision every time.
